Wood

TOPSOLID'WOOD

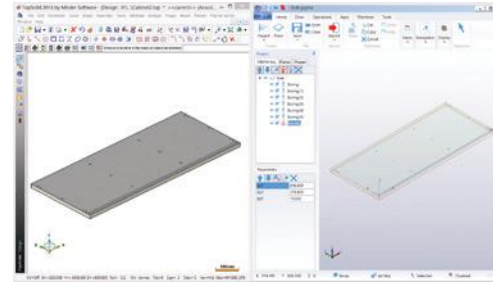

- › **Quickly** design your projects
- › Automatically **manage** cut lists for curved parts
- › **Easily** produce your drawings
- › **Produce faster** with the Maestro interface
- › Secure your machining process with **easy-to-customize** part support systems

WHY TopSolid'Wood is the right choice for you

Quickly design your projects

TopSolid **simplifies** your life with intelligent, easy-to-use constrained blocks that allow for rapid modeling and assembly of panels.

Produce faster with the Maestro interface

As much as we know you **like to program** parts, we also know you want to be efficient. It is why we have a new interface called Maestro. Maestro establishes a direct link between TopSolid'Wood and the new generation of CNC machining centers from the SCM Group. Life just got a **bit simpler**.

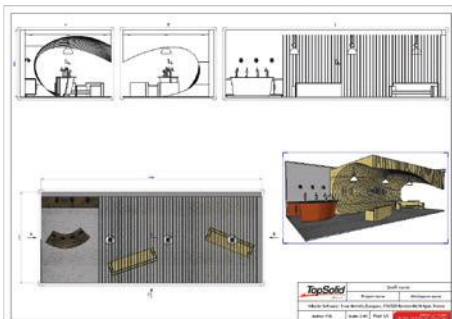

Automatically manage cut lists for curved parts

You work hard enough. Don't waste any of your hard work with harder processes. Use TopSolid to **completely automate** the cutting of curved parts within standard components. Then document these dimensions automatically in the bill of material for the final assembly.

Secure your machining process with easy-to-customize part support systems

TopSolid has made the hard-to-manage... easy-to-customize. It is now possible to configure the number of rails used to support your part and **automatically optimize** their use during the machining operations.

Easily produce your drawings

Sometimes...time is not your friend. You need to be able to work **efficiently and quickly**. This is why TopSolid has been optimized to create drawings very quickly and with as few clicks as possible.
